Entry/departure card revised
Proposal to implement the revised card has been made and the task force is awaiting the response from the Ministry of Home Affairs (Department of Immigration)
TSTF is currently in the early stages of developing the tourism statistics metadata (to be able to identify data gaps in tourism)
Tourism Statistics Task Force is planning to request funds from different agencies so as to hold a training workshop on collection and compilation of accurate tourism statistics.

To revise the collection tool for collection of accommodation statistics to enable classification of information by locals and non-locals.
Promotion of institutional cooperation (through formation of TSTF, where different agencies can discuss and assist each other on technical aspects of collection and compilation of tourism statistics)
Accurate data on Length of Stay can be achieved by either, maximizing the collection of both entry and departures with proper classification of locals and non-locals so that the sets of data can be compared for the purpose of calculating the actual length of stay for every individual visitor.

To achieve the above, a network system has to be put in place at all ports of entry and exit.

If the network system cannot be used for different reasons, the entry/departure cards should make provision for visitors to indicate both their intended length of stay upon arrival and the actual length of stay upon departure.
